INTEGRATED GEOSPATIAL INFORMATION FRAMEWORK

Part 1: Overarching Strategic Framework - **WHY** geospatial information is a critical element of national social and economic development, and needs to be strengthened.

Part 2: Implementation Guide - **WHAT** actions can be taken to strengthen geospatial information management.

Part 3: Country-level Action Plans - **HOW** the actions will be carried out, **WHEN** and by **WHOM**.

STRATEGIC PLANNING DEFINITIONS

© LeighCowan 2018

What is a Strategic Framework?

STRATEGY – Why?

IMPLEMENTATION – What and How?

UN-GGIM

United Nations Secretariat
Global Geospatial Information Management

Positioning geospatial information to address global challenges

ggim.un.org

The Integrated Geospatial Information Framework provides a basis and guide for developing, integrating and strengthening geospatial information management.

INTEGRATED GEOSPATIAL INFORMATION FRAMEWORK

A STRATEGIC GUIDE TO DEVELOP AND STRENGTHEN
NATIONAL GEOSPATIAL INFORMATION MANAGEMENT

PART 1: OVERARCHING STRATEGIC FRAMEWORK

The Overarching Strategic Framework is a mechanism for articulating and demonstrating national leadership, cultivating champions, and developing the capacity to take positive steps.

<http://ggim.un.org/IGIF/>

UN-GGIM

United Nations Secretariat

Positioning geospatial information to address global challenges

ggim.un.org

Overarching Strategic Framework: Vision and Mission

The **Vision** recognizes the responsibility for countries to plan for and provide better outcomes for future generations, and our collective aspiration to ‘leave no one behind’.

The **Mission** is designed to stimulate action towards bridging the geospatial digital divide; to find sustainable solutions for social, economic and environmental development; and to influence inclusive and transformative societal change for all citizens according to national priorities and circumstances.

Vision

The efficient use of geospatial information by all countries to effectively measure, monitor and achieve sustainable social, economic and environmental development - leaving no one behind.

Mission

To promote and support innovation and provide the leadership, coordination and standards necessary to deliver integrated geospatial information that can be leveraged to find sustainable solutions for social economic and environmental development.

UN-GGIM

United Nations Secretariat
Global Geospatial Information Management

Positioning geospatial information to address global challenges

ggim.un.org

The 7 Principles are the key characteristics and values that provide the compass for implementing the Framework, and allow for methods to be tailored to individual country needs and circumstances.

UN-GGIM

United Nations Secretariat
Global Geospatial Information Management

VISION

The efficient use of geospatial information by all countries to effectively measure, monitor and achieve sustainable social, economic and environmental development – leaving no one behind

MISSION

To promote and support innovation and provide the leadership, coordination and standards necessary to deliver integrated geospatial information that can be leveraged to find sustainable solutions for social, economic and environmental development.

STRATEGIC DRIVERS

National Development Agenda • National Strategic Priorities • National Transformation Programme • Community Expectations • Multilateral trade agreements • Transforming our World: 2030 Agenda for Sustainable Development • New Urban Agenda • Sendai Framework for Disaster Risk Reduction 2015–2030 • Addis Ababa Action Agenda • Small Island Developing States Accelerated Modalities of Action (SAMOA Pathway) • United Nations Framework Convention on Climate Change (Paris Agreement) • United Nations Ocean Conference: Call for Action

UNDERPINNING PRINCIPLES

| | | | | | | |
|----------------------|-----------------------------|--------------------------------------|-------------------------------|----------------------|------------------------|---------------------------|
| Strategic Enablement | Transparent and Accountable | Reliable, Accessible and Easily Used | Collaboration and Cooperation | Integrative Solution | Sustainable and Valued | Leadership and Commitment |
|----------------------|-----------------------------|--------------------------------------|-------------------------------|----------------------|------------------------|---------------------------|

GOALS

| | | | |
|---|---|--|--------------------------------------|
| Effective Geospatial Information Management | Increased Capacity, Capability and Knowledge Transfer | Integrated Geospatial Information Systems and Services | Economic Return on Investment |
| Sustainable Education and Training Programs | International Cooperation and Partnerships Leveraged | Enhanced National Engagement and Communication | Enriched Societal Value and Benefits |

The 8 Goals reflect a future state where countries have the capacity and skills to organize, manage, curate and leverage geospatial information to advance government policy and decision-making capabilities.

Positioning geospatial information to address global challenges

| Partnerships | Capacity and Education | Communication and Engagement |

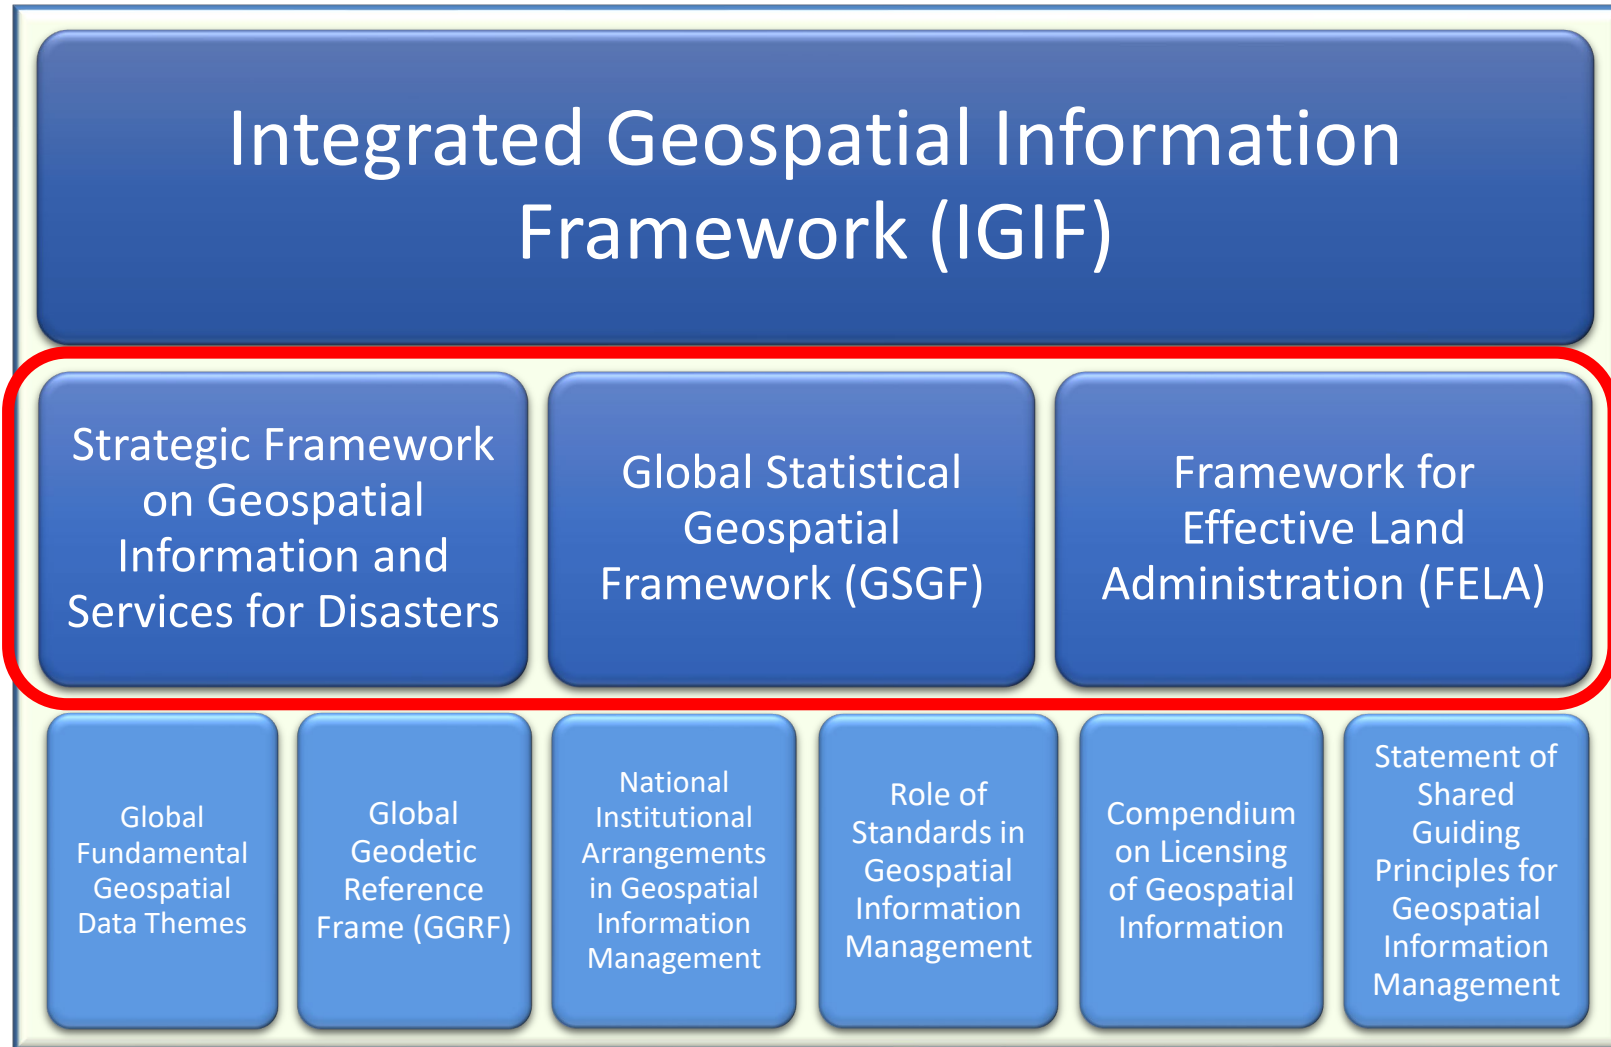

INTEGRATED GEOSPATIAL INFORMATION FRAMEWORK (IGIF)

- The IGIF focuses on geospatial information that is integrated with any other meaningful data to solve societal and environmental problems.
- The IGIF acts as a catalyst for economic growth and opportunity, and to provide understanding and benefit from a country's national development priorities and the SDGs.
- **The IGIF is not an infrastructure. It is a standalone 'framework', independent of an SDI and any other infrastructures.**
- **However, the IGIF fundamentally recognizes, builds substantially upon, and augments previous investments and achievements in planning and implementing SDIs and NSDIs.**
- The IGIF not only provides additional structure, reasoning, and evidence as to why SDI's are important, but also provides the guidance, options and actions to plan for, develop, and implement an integrated national geospatial information management program, aligned to national strategies priorities, and circumstances within a country.

Data

Innovation

Standards

Partnerships

Capacity
and
Education

Communication
and
Engagement

Scope and Purpose

The strategic framework aims to guide all stakeholders and partners in the management of geospatial information and services in all phases of disaster risk management

Expected Outcome

The social, economic, and environmental risks and impacts of disasters are prevented or reduced through the use of geospatial information and services

Goal

Quality geospatial information and services are available and accessible in a timely and coordinated way to support decision-making and operations within and among all stakeholders and partners and in all phases of disaster risk management

Priorities for Action

Member States with the support of regional and international organizations as well as other relevant organizations should focus their action on the following 5 priorities for action

Priority 1 Governance and Policies

Policies, collaborative agreements and legal frameworks aiming at improving the availability and accessibility of quality geospatial information and services among all stakeholders and partners established and implemented in all phases of DRM

Priority 2 Awareness Raising and Capacity Building

Awareness is raised among concerned entities on the importance of geospatial information and services and all necessary technical and human capacities are built and/or strengthened

Priority 3 Data Management

Geospatial databases and information products are developed based on common standards, protocols and processes as important tools in every decision-making process across all phases of DRM

Priority 4 Common Infrastructure and Services

Common facilities and services are established for all key stakeholders and partners to have a common operational picture of emergency scenarios

Priority 5 Resource Mobilization

All necessary technical, human and financial resources are available to sustain all the activities of DRM

Guiding Principles

The strategic framework is guided by the 2030 Agenda for Sustainable Development, International Strategy for Disaster Reduction, Sendai Framework for Disaster Risk Reduction (2015-2030), the UN-GGIM Global Statistical Geospatial Framework, UN General Assembly resolution on international cooperation on humanitarian assistance in the field of natural disasters, from relief to development and other relevant instruments. It is also guided by the principles of open data and requirements of national data infrastructure, and by the UN-GGIM's Statement of Shared Guiding Principles for the Management of Geospatial Information.

ggim.un.org

WHAT specific actions need to be taken for implementation of the Strategic Framework, and **HOW** will the actions be carried out, **WHEN** and by **WHOM**?

VI. Implementation

34. Geospatial information and services contribute vastly to the overarching effort of preventing or reducing the social, economic, and environmental impacts of disasters. Thus, Member States and other stakeholders should prioritize a geospatially-oriented agenda in their respective development plans and programs.

35. Member States and other stakeholders should commit themselves to the full implementation of the priorities for action by improving their current capacities in providing geospatial information and services across all phases of DRM and actively promoting the goals of the five priorities for action, and translate the same into national implementation plans.

36. A participatory and inclusive approach in generating, improving and managing geospatial information should be employed by all entities involved in DRM efforts.

37. Managing geospatial information and services before, during and after disasters will require all Member States and other stakeholders to institutionalize good governance practices and science-based policies supported by improved capacities on human resource, infrastructure and geospatial data management, among others.

38. In support to the Sendai Framework for Disaster Risk Reduction (2015-2030), international cooperation should be recognized as a critical element in managing geospatial information and services before, during and after disasters, and thus implementing the provisions of the strategic framework. Adopting best practices and identifying champions among Member States will augment their existing capacities in using geospatial information and services across all phases of the DRM.

This Strategic Framework is not only timely in view of the increasing number and impact of disasters, but also contributes to the Member States' implementation of the Sendai Framework for Disaster Risk Reduction 2015-2030.

Transforming our world -
The 2030 Agenda for
Sustainable Development

“We see the value of the IGIF becoming a kind of umbrella over a number of underlying guidelines and frameworks developed under UN-GGIM over the last 10 years. It will be important to continue the good work to ensure that these processes converge and give special attention to consistency with other frameworks”

IGIF Implementation Guide, Global Consultation, June 2020
